

Programming Behavior with Javascript

This is kind of a crazy language to start with, but jsfiddle is so easy that I think it'll be worth it for now. The basics are the same in every programming language, so we'll be able to switch without too much trauma.

Output

<http://jsfiddle.net/czjxjgaL/1/>

Change the label on the button.		Add a picture above the name	
Change the text that gets displayed.		Add a second button that sets the name to something different.	
Make the displayed text look nice.		Add a third button that erases all the text.	

Input

<http://jsfiddle.net/eap6d8y6/1/>

Change the greeting to Latin.		Add a second input text box and display both names.	
Only display the greeting if the person enters "Buzz Lightyear" as their name.		Display a funny greeting if the person enters "Steve Rogers" as their name.	

Conditions

<http://jsfiddle.net/caf8pcx6/>

Only tell people they have a short name if their name has less than four letters.		Change the awesome name detector to check whether the second letter of a person's name is 'e'.	
Add a second text input box and display an alert if both names are the same.		Change the awesome name detector to check whether the second letter of a person's name is a vowel.
